

Treatments

Cardiology:

1. Cardiac Generator Replacement & Pacemaker Surgery

This procedure replaces the pacemaker's battery-powered generator, ensuring it continues to regulate heart rhythm effectively and prevent irregular heartbeats.

2. Cardiac Imaging

Cardiac imaging uses advanced technology to visualize the heart's structure and function, helping diagnose and monitor various cardiovascular conditions.

3. Cardiac Rehabilitation

Cardiac rehabilitation offers a comprehensive approach to recovery, helping patients regain strength, improve heart function, and reduce the risk of future heart problems.

4. Implantable Cardioverter Defibrillator (ICD)

ICD implantation provides long-term protection against life-threatening heart rhythm disorders, ensuring immediate intervention in case of abnormal electrical activity.

5. Leadless Pacemaker Implantation

Leadless pacemaker implantation offers a minimally invasive solution for regulating heart rhythm, placing a compact, battery-powered device directly inside the heart without the need for leads.

6. Pacemaker with Conduction System Pacing

Designed to mimic natural heart rhythms, this pacing method enhances cardiac efficiency by integrating seamlessly with the heart's conduction pathways.

7. Subcutaneous Implantable Cardioverter Defibrillator (S-ICD)

This advanced defibrillator provides protection against sudden cardiac arrest without the need for leads inside the heart, reducing potential complications

Urology

1. Benign Prostatic Hyperplasia (BPH) Surgery

This procedure improves bladder function and quality of life by addressing difficulties such as frequent urination, weak stream, and incomplete emptying.

2. Bladder Cancer Surgery

Bladder cancer surgery involves the removal of cancerous tissue from the bladder, ranging from minimally invasive tumor excision to partial or complete bladder removal in advanced cases.

3. Kidney Stone Removal Surgeries

Kidney stone removal surgeries use advanced techniques to break down or extract stones, relieving pain and restoring normal kidney function.

4. Minimally Invasive Prostatectomy

A procedure that uses advanced techniques to remove the prostate through small incisions, minimizing tissue damage and promoting quicker recovery.

5. Prostate Cancer Surgery

Prostate cancer surgery involves the removal of cancerous tissue from the prostate, often through minimally invasive or robotic-assisted techniques to preserve function and recovery.

6. Testicular Cancer Surgery

This surgery involves the removal of the affected testicle (orchiectomy) to eliminate cancerous tissue while preserving the function of the remaining testicle.

7. Urinary Tract Surgery

Urinary tract surgery treats conditions like stones, infections, or tumors in the kidneys, bladder, and urethra, restoring function and relieving symptoms.

8. Vasectomy

Vasectomy is a minor surgical procedure that involves cutting or sealing the vas deferens to prevent sperm from reaching the semen, providing a permanent solution for male contraception.

Gynaecology

1. Colposcopy & Cervical Treatment

Colposcopy and cervical treatment allow for a detailed examination of the cervix to identify and address issues like abnormal cell changes or early signs of cervical cancer.

2. Diagnostic & Operative Hysteroscopy

This procedure involves using a thin, flexible camera to diagnose and treat uterine issues, such as abnormal bleeding, fibroids, or polyps, in one session.

3. Early Pregnancy & Emergency Gynecological Surgeries

Early pregnancy and emergency gynecological surgeries address urgent conditions such as ectopic pregnancy, miscarriage, or bleeding, ensuring maternal health and safety.

4. Endometrial Ablation

Endometrial ablation is an effective treatment for abnormal bleeding by removing the uterine lining, providing a permanent solution with a quick recovery time.

5. Fibroid Resection (Myomectomy)

Myomectomy is a surgical procedure that removes fibroids from the uterus, improving symptoms like bloating and discomfort while maintaining the ability to conceive.

6. HyCoSy (Hysterosalpingo-Contrast Sonography)

HyCoSy is a non-invasive procedure that uses ultrasound and contrast dye to assess the fallopian tubes and uterus, helping diagnose infertility or blockages.

7. Hysteroscopy (Out-Patient & Operative)

This procedure involves inserting a small camera into the uterus to diagnose or treat issues such as abnormal bleeding, fibroids, or polyps, typically performed in an outpatient setting.

8. Laparoscopic (Key-Hole) Surgery

Laparoscopic surgery uses small incisions and a camera to perform procedures with minimal tissue damage, leading to quicker recovery and less scarring.

9. Minimally Invasive Gynecological Surgery

This approach involves smaller incisions, reducing pain and scarring while treating gynecological issues like fibroids, ovarian cysts, and pelvic pain.

10. Ovarian Cystectomy

Ovarian cystectomy is a surgical procedure to remove cysts from the ovaries, preserving healthy tissue and maintaining fertility when possible.

Gastroscopy:

1. Abdominal Wall Injections

This procedure targets the abdominal muscles with injections of anesthetics, corticosteroids, or Botox to relieve pain, inflammation, and muscle tightness.

2. Botox Injections for Anal Fissures

This treatment involves injecting Botox into the anal sphincter to reduce muscle spasms, providing relief from pain and promoting the healing of chronic anal fissures.

3. Colonoscopy & Endoscopic Polypectomy

This procedure uses a flexible camera to inspect the colon and remove polyps or abnormal tissue, reducing the risk of colorectal cancer and improving digestive health.

4. Endoscopic Intragastic Balloon Placement

This procedure involves inserting a balloon into the stomach to promote weight loss by reducing appetite and creating a feeling of fullness.

5. Gastroscopy (Endoscopic Procedures)

Gastroscopy is an endoscopic procedure that uses a flexible camera to examine the stomach, esophagus, and duodenum, diagnosing conditions like ulcers or inflammation.

6. Haemorrhoidal Banding

Haemorrhoidal banding offers a quick and effective solution for internal hemorrhoids, reducing discomfort and improving symptoms with minimal recovery time.

7. High-Resolution Esophageal Manometry

High-resolution esophageal manometry measures the pressure and coordination of the esophageal muscles, helping diagnose swallowing disorders and conditions.

8. Impedance Reflux Monitoring & Bravo Capsule Reflux Studies

These advanced procedures measure acid levels and reflux events using a small capsule or impedance probe, offering precise data to guide the treatment of reflux-related disorders.

9. Nerve Block for Chronic Abdominal Pain

A nerve block for chronic abdominal pain involves injecting anesthetic near specific nerves to interrupt pain signals, providing relief from conditions like irritable bowel syndrome or visceral pain.

10. Radiofrequency Ablation for Barrett's Esophagus

This treatment uses targeted radiofrequency energy to eliminate precancerous cells in the esophagus, helping to restore normal tissue and prevent further complications.

11. Therapeutic Gastroscopy

Therapeutic gastroscopy combines diagnostic and therapeutic treatments, allowing doctors to remove polyps, stop bleeding, or treat ulcers during the same procedure.

12. Transnasal Gastroscopy

Transnasal gastroscopy provides a less invasive option for diagnosing issues in the stomach and esophagus, such as ulcers or reflux, with minimal discomfort.

Plastic Surgery

1. Abdominoplasty (Tummy Tuck)

Abdominoplasty (Tummy Tuck) is a transformative body contouring procedure designed to remove excess abdominal skin, tighten underlying muscles, and create a firmer, flatter abdomen. At Valiant Clinic, our expert plastic surgeons offer customized tummy tuck solutions, addressing concerns such as loose skin, stubborn fat, and weakened abdominal muscles.

2. Body Lift Surgery

Body Lift Surgery is a comprehensive procedure designed to remove excess skin and tissue, improving the shape and tone of the body. At Valiant Clinic, our expert plastic surgeons specialize in full-body contouring, helping patients achieve a tighter, more sculpted physique following weight loss or aging-related skin laxity.

3. Breast Augmentation

Breast Augmentation is a transformative procedure designed to enhance breast size, shape, and symmetry. At Valiant Clinic, our expert plastic surgeons specialize in customized breast augmentation using implants or fat transfer techniques to achieve natural, proportionate, and aesthetically pleasing results. We prioritize patient safety and precision, delivering personalized treatment plans for optimal outcomes.

4. Breast Uplift (Mastopexy)

A Breast Uplift (Mastopexy) is a specialized procedure designed to reshape and lift sagging breasts, restoring a firmer, more youthful appearance. At Valiant Clinic, our expert plastic surgeons provide customized mastopexy procedures, helping patients achieve improved breast shape and confidence through advanced surgical techniques.

5. DIEP Flap (Deep Inferior Epigastric Perforator Flap)

The DIEP Flap (Deep Inferior Epigastric Perforator Flap) is an advanced reconstructive procedure that uses the patient's own abdominal skin and fat to rebuild the breast after mastectomy while preserving muscle integrity. At Valiant Clinic, our expert plastic and reconstructive surgeons specialize in natural breast reconstruction, offering patients a safe and highly effective alternative to implants.

6. Labiaplasty

Labiaplasty is a surgical procedure designed to reshape the labia minora and/or labia majora for both functional and aesthetic reasons. At Valiant Clinic, our expert surgeons specialize in precise, patient-focused techniques to enhance comfort, symmetry, and confidence while preserving natural function.

7. Male Breast Surgery (Gynaecomastia)

Male Breast Surgery (Gynaecomastia Correction) is a specialized procedure aimed at reducing excess male breast tissue to create a more masculine and sculpted chest contour. At Valiant Clinic, our expert plastic surgeons use advanced liposuction and surgical excision techniques to ensure natural, lasting results.

8. Mommy Makeover

A Mommy Makeover is a comprehensive set of procedures designed to restore a woman's pre-pregnancy body shape by addressing common concerns such as loose skin, sagging breasts, and stubborn fat deposits. At Valiant Clinic, our expert plastic surgeons tailor each Mommy Makeover to the individual, ensuring natural, long-lasting results.

9. Post-Weight Loss Surgery

Post-Weight Loss Surgery is a set of body contouring procedures designed to remove excess skin and reshape the body following significant weight loss. At Valiant Clinic, our expert plastic surgeons specialize in customized body lift surgeries, helping patients achieve a toned, defined, and natural silhouette while restoring confidence and comfort.

10. SEIA Flap (Superficial Inferior Epigastric Artery Flap)

The SEIA Flap (Superficial Inferior Epigastric Artery Flap) is an innovative breast reconstruction technique that utilizes skin and fat from the lower abdomen without cutting through the abdominal muscles, ensuring a quicker recovery and minimal impact on core strength. At Valiant Clinic, our expert reconstructive surgeons specialize in muscle-sparing techniques, providing natural, long-lasting breast reconstruction solutions for patients after mastectomy.

11. Blepharoplasty (Eyelid Surgery)

Blepharoplasty (Eyelid Surgery) is a transformative procedure designed to improve the appearance of the eyelids by removing excess skin and fat, reducing puffiness, and rejuvenating the overall facial appearance. At Valiant Clinic, our expert plastic surgeons specialize in advanced techniques that ensure natural-looking results with minimal downtime.

12. Brachioplasty (Arm Lift)

Brachioplasty (Arm Lift) is a body contouring procedure designed to reshape the upper arms by removing excess skin and fat, creating a sleeker, more toned appearance. At Valiant Clinic, our expert plastic surgeons use advanced techniques to ensure natural-looking results with minimal scarring.

13. Breast Reduction

Breast Reduction surgery, also known as reduction mammoplasty, is designed to alleviate physical discomfort and improve body proportions by reducing excess breast tissue, fat, and skin. At Valiant Clinic, our board-certified plastic surgeons specialize in personalized breast reduction procedures, helping patients achieve aesthetic balance and relief from discomfort.

14. Correction of Asymmetry

Correction of Asymmetry is a specialized surgical procedure aimed at addressing differences in breast size, shape, or position. At Valiant Clinic, our expert plastic surgeons provide tailored solutions to create balanced, natural-looking breasts, restoring symmetry and enhancing confidence through advanced surgical techniques.

15. Facelifts

A Facelift is a highly effective procedure for rejuvenating facial appearance by reducing sagging skin and wrinkles, restoring a youthful and refreshed look. At Valiant Clinic, our

expert plastic surgeons specialize in natural-looking facelifts, enhancing facial contours while maintaining aesthetic harmony.

16. Liposuction

Liposuction is a body contouring procedure designed to eliminate localized fat deposits that are resistant to diet and exercise, refining body contours for a more sculpted appearance. At Valiant Clinic, we use advanced liposuction techniques to target specific areas while ensuring minimal downtime and natural-looking results.

17. Microsurgical Breast Reconstruction

Microsurgical Breast Reconstruction is an advanced procedure that utilizes the patient's own tissue for natural-feeling breast reconstruction. At Valiant Clinic, we specialize in microsurgical techniques such as DIEP (Deep Inferior Epigastric Perforator) flap reconstruction, ensuring a more natural look and feel compared to traditional implant-based reconstruction.

18. Otoplasty (Ear Surgery)

Otoplasty (Ear Surgery) is a cosmetic procedure designed to correct protruding or misshapen ears to achieve improved facial balance and symmetry. At Valiant Clinic, our expert plastic surgeons use advanced techniques to reshape and reposition the ears while ensuring natural, long-lasting results.

19. Removal and Replacement of Implants

Over time, breast implants may require removal or replacement due to aesthetic preferences, medical concerns, or implant lifespan. At Valiant Clinic, our highly skilled plastic surgeons specialize in implant exchange and removal, often combining the procedure with capsulectomy, breast uplift, or lipomodelling to achieve optimal aesthetic and functional results.\

20. Thigh and Buttock Lift

A Thigh and Buttock Lift is a specialized body contouring procedure designed to enhance the shape, tone, and firmness of the thighs and buttocks. At Valiant Clinic, our expert plastic surgeons focus on removing excess skin and fat, improving overall body proportions, and achieving a youthful, sculpted lower body.
